

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

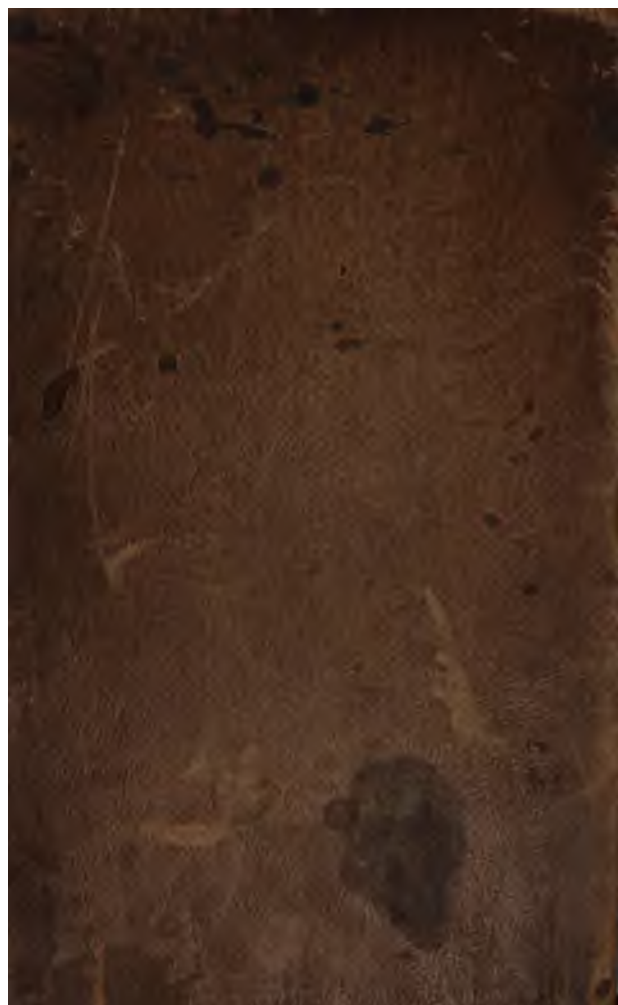

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

~~~~~

PREFACE.

IN submitting to the public the following *Tables of Interest*, the author is fully aware that he has been treading a beaten track, and that his essay has been made on a subject that is almost exhausted. The counting-houses and offices of our Merchants, Bankers, Brokers, and Lawyers, for whose more especial use such Tables are designed, are already supplied with valuable productions of this description, from the respective merits of which it is not his purpose, in the slightest degree, to detract.

Encouraged, nevertheless, by the flattering approval of valued friends, and still more by the numerous testimonials which have been so cheerfully extended to him, by mercantile and

iii

the public the result of his labours, confident belief that *some* of the improvement has introduced in the construction of will be found essentially useful.

By the adoption of the *Decimal system* CONDENSING INTO THE SMALLEST POSSIBLE the interest on any sum from \$1 to \$1000 (at 6, 7, and 8 per cent. per ann.), computed in days, months, and years, for 360 days to the year, the author feels as if he has given a character of *simplicity*, and *completeness* to his Interest, not to be found in any that have preceded them, while at the same time the method

places it within the reach of all who may require such a publication.

The author begs leave to tender his warmest acknowledgments to those gentlemen who, after full examination, have borne such strong and willing testimony to the merits of his undertaking, and in the publication of their names* he would assure one and all, that he will ever cherish the most grateful recollection of their consideration and kindness.

GEORGE OATES.

Philadelphia, Jan. 12, 1843.

* For a list of testimonials, see the end of the book.

EXPLANATION OF TIME TABLE.

GENERAL RULE.—The number of days from *any* day in a month in the first or left hand column, to the *same* day of any *other* month running horizontally, is specified by the figures placed under *that* month.

Examples.

How many days from the 10th January to the 10th July?

Turn to January in the left hand column, and move from left to right, past February, March, April, May, and June, to July, under which are found the figures 181,—the required answer.

Find the number of days from the 7th April to the 19th November.

From the 7th April to the 7th November are 214 days; to these add 12, the difference between 7th and 19th, and 226 is the number sought.

Find the number of days from 27th March to the 14th September.

From 27th March to 27th September are 184 days; from these deduct 13, the difference between 14th and 27th, and the number sought is 171 days.

✂ To find the number of days from a given date to a preceding one, instead of making a *retrograde* calculation, simply *reverse the question*.

Example.—How many days from the 25th December to the 14th May preceding?

From 14th May to 14th December are 214 days; to these add 11, the difference between 14th and 25th, and 225 is the answer.

N. B. In leap-years One must be added to the number, after the 28th February.

second is the *units* column, and gives the interest on any sum from \$1 to \$10. The third is column, and exhibits the interest on any *tens* from \$10 to \$100. The fourth is the *hundreds* column, and gives the interest on any sum *dreds*, from \$100 to \$1000. And the fifth *sands* column, shows the interest on any *thousands*, from \$1000 to \$10,000.

Examples.

Show the interest on \$9676 for 1 day, at 6 per cent. to the year.

Turn to the first table, and in the
Thousands column, opposite the figure 9 is
Hundreds 8 ..
Tens 7 ..
Units 6 ..

Equal

Show the interest on \$7463 for 37 days at 6 per cent. to the year.

Turn to table, (6 per cent.,) 37 days, (365 days) and in the

Thousands column, opposite the figure 7 are
Hundreds 4 ..
Tens 2 ..

TESTIMONIALS.

THE AUTHOR of this work has great pleasure in laying before the public the following testimonials, which he has had the honour to receive from gentlemen and firms of the highest respectability in the country. The first, is a letter of introduction (given to him by Thomas Drown, Esq., Cashier of the Shawmut Bank, in Boston,) to the cashiers of the banks in that city, and is referred to by other gentlemen, to whom the Tables were subsequently submitted for their inspection.

Boston, Nov. 26, 1841.

SIR,—Allow me to introduce to you Mr. George Oates, who would like to exhibit to you some specimens of Interest, Discount, and Premium Tables that have been submitted to my examination, and which appear so decidedly superior to any thing of the kind that has ever come to my knowledge, that it seems but a reasonable anticipation that they will supersede all others.

A few moments of your time only, will enable you to perceive from Mr. Oates' explana-

Baltimore, 12th December, 1842.

Oates' Interest and Exchange Tables constructed on a plan entirely new.

Oates.—We have not only examined with considerable care ourselves, but it under the eye of one thoroughly such matters, and perfectly competent of its usefulness and accuracy, with us in the opinion, that from the of the arrangement, conciseness, and fulness of the calculations, it must be that have hitherto been published tables are shown the interest on any sum from \$1 to \$10,000, at 6, 7, and 8 per annum, from one to ninety-four days to eleven months, and from one to a consecutively, both for 360 and 365 year. Also, the value of Domestic and any sum from \$1 to \$10,000, at any rate and discount from 1st of any

conclusive character, and furnish ample testimony in favour of the accuracy and value of the work.—*Hunt's Merchant's Magazine.*

Tables of Interest and Exchange, by Geo. Oates.—We can very conscientiously recommend this work, which has just made its appearance, to those whose avocations may render desirable such an auxiliary. By adopting the decimal system, and by condensing into the smallest compass the interests in any sum from \$1 to \$10,000, at 6, 7, and 8 per cent. per annum, computed by days, months and years, for 360 and 365 days to the year, a character of simplicity, conciseness, and completeness has been given to the interest tables not to be found in any work extant. There are besides four series of tables for facilitating the calculation of Domestic and Sterling Exchanges, on an entirely new plan, by which also may be ascertained the amount which will be absorbed by an investment at the different rates of exchange. Testimonials to the accuracy and superiority of these Tables are given from the officers of most of the banks and brokers in our Atlantic cities.—*Morning Courier and New York Enquirer.*

Oates' Interest and Exchange Tables.—A volume, with this title, has been published, and has the recommendations of some of our best and most experienced bankers. In point of compactness, it has much the advantage of the interest tables commonly in use, being prepared on a plan which condenses and simplifies the

Tables of Interest, Exchange, &c.,
Oates.—A collection of tables for the purpose of simplifying the computation of interest on any sum from \$1 to \$10,000, at 6, 7, and 8 per cent. and for any time from one day to six months. It also contains tables for computing the value of domestic and foreign exchange, from $\frac{1}{8}$ of 1 per cent. to 10 per cent. premium or discount, and tables for converting Federal money into Sterling, or vice versa, at rates from $\frac{1}{8}$ of 1 to 10 per cent.

These tables are most convenient in their arrangement, and some of the most practical in the country, who are far better judges of the matter than we can ever expect to be. They are a testimony to the correctness of the calculations, and the high value of the compendium to those who are engaged in commercial pursuits.—
Commercial Advertiser.

Tables of Interest and Exchange.
on a plan entirely new. By George Oates.
This is one of the most valuable works

banking calculation must be immensely facilitated by the use of these admirable tables, and we cannot have the slightest doubt that the work will meet the most extensive sale.—*New York Herald.*

Tables of Interest and Exchange, by George Oates.—This elaborate work is highly commended in the testimonials appended to it, for its accuracy and usefulness. It gives the interest on any sum from \$1 to \$10,000, at 6, 7, and 8 per cent. per annum, computed by days, months, and years, for 360 days, and 365 days to the year, also tables for the calculation of Domestic and Sterling Exchanges.—*New York Journal of Commerce.*

Oates' Interest and Exchange Tables.—We are indebted to the publisher for a copy of this invaluable work, and have no hesitation in commending it to the attention, patronage, and confidence of the public. These tables must be found infinitely convenient if not indispensable, to the merchant, the banker, and the man of business generally; and as their entire accuracy may be most implicitly confided in, we deem it scarcely necessary to commend them to all who are engaged in active business employment.—*New York Standard.*

Tables of Interest and Exchange.—George Oates has published a work of very convenient form, very similar to Rowlett's in point of size, in which are shown the interest on any sum

down for 300 days and 300 days a
Also the value of Domestic Exchange
to \$10,000, at any rate of premium an
from $\frac{1}{8}$ of 1 per cent. (by $\frac{1}{8}$ ths) to 10
and also the value, in Federal money,

discount with the utmost correctness

George Oates. They consist of Interest Tables, on any sum from \$1 to \$10,000, at 6, 7, and 8 per cent., and for any divisions of time from one day to six years, calculated for 360 days as well as 365 days to the year. There are likewise, and these are valuable accessions, tables for ascertaining the value of Bills of Exchange at rates from $\frac{1}{8}$ to 10 per cent. of either premium or discount, and also for turning any sum in Federal money to Sterling, or vice versa, at any of the rates of premium or discount, from $\frac{1}{8}$ to 10 per cent. The whole is so exceedingly clear and perspicuous, that it cannot fail to receive extensive patronage in the mercantile world; and we cordially wish the work a most extensive circulation.—*New York Albion*.

Oates' Interest and Exchange Tables. A valuable Work for Bankers, Merchants, &c.—A most excellent publication has just issued from the Philadelphia press, and one every way entitled to confidence and patronage. We allude to "*Tables of Interest and Exchange*, by George Oates," a gentleman who has devoted much time and labour to the undertaking. We have examined the work with some care, and believe it to be one of the best, in every respect, that has ever appeared upon the subjects named. Mr. Oates has prepared his tables with great care and accuracy—the type is distinct—the figure-work is all in clear characters, while the paper is good, and the binding substantial. The whole may be regarded as a labour-saving machine for merchants, bankers and business men.
